

CHO™ Concrete Cleaner

Description: CHO™ Concrete Cleaner is a concentrated citric acid based cleaner that mixes with water and is used to open the pores of concrete while aiding in the removal of efflorescence and other organic stains from the surface of concrete. CHO™ Concrete Cleaner is very effective for cleaning and preparing concrete prior to staining, sealing or overlaying. The etched surface allows for greater penetration of topically applied coloring materials and sealers, and improves the adhesion of cementitious overlays.

Packaging: 1 pound (0.45 kg) can
5 pound (2.27 kg) bucket

Mixing: Mix 1 pound (0.45 kg) of CHO™ Concrete Cleaner with 1 gallon (3.8 L) of clean water.

Coverage: 1 Gallon of solution will clean approximately 100-150 square feet (9.29-13.94 m²).

Application: Pour or brush apply the solution onto the surface and then scrub with a clean bristle brush or rotary machine. Hard-troweled surfaces will require multiple applications of CHO™ Concrete Cleaner. DO NOT allow the cleaning solution to dry on the surface. After cleaning with CHO™ Concrete Cleaner, neutralize the surface by brushing and washing with a solution of either 1 cup (240 ml) ammonia & 5 gallons (18.93 L) of water or 1 pound (0.45 kg) of baking soda & 5 gallons (18.93 L) of water. DO NOT allow the neutralizing solution to dry on the surface. Flush and wet vacuum the residue. THOROUGHLY remove residues from the neutralizing and cleaning solutions from the surface. Neutralize and rinse the surface with water until a pH of 7 is achieved. Wet mopping alone will NOT adequately remove the neutralizing solution. The substrate must be completely **DRY** before applying stains, coatings, and overlays.
